HostEngine 4URP Host Computer with Redundant Power – User Guide

HostEngine 4URP computer features Intel® Xeon® E5-2600v4 (Broadwell) Series dual-processors with the Intel C612 chipset. HostEngine 4URP provides four PCI Express (PCIe) Gen 3.0 x16 expansion slots. Each slot accommodates a full-height, full-length, double-wide GPU or a half-height, half-length, single-wide controller such as the Cubix Host Interface Controller (HIC) that connects to Cubix Xpander products. Each HIC connects to multiple slots within an Xpander Rackmount 8 or other Xpander products.

By connecting HostEngine to Xpander Rackmount 8, you can add eight double-wide GPUs such as NVIDIA® Quadro M5000 or M6000 for running Autodesk® 3ds Max or Bunkspeed® Shot with Mental Images® iray on Linux or Microsoft® Windows®. By connecting Xpander, you can also run BlackMagic Design® DaVinci Resolve® for Linux or Windows on HostEngine 4URP with 8 x NVIDIA GPUs. Connecting to Xpander Rackmount 8 also enables you to connect to GPU Compute Engines such as NVIDIA or AMD GPUs for HPC applications, virtual desktop projects or multiple Intel Xeon Phi coprocessors with active cooling for parallel processing.

PCIe Gen 3 Slots

When installing a HIC in HE4URP, make sure you seat it in one of the PCIe Gen 3 x16 slots, which are numbered CPU1 Slot2, CPU1 Slot 4, CPU2 Slot 6 and CPU2 Slot 8. For double-wide accelerators like NVIDIA Quadro Series or AMD Firepro W Series, use these four slots as well. If you add a single-wide display controller like AMD Firepro W2100 / W4100 for connecting one or more 4K / UHD displays, and the PCIe Gen 3 x16 slots are occupied, use CPU1 Slot 10.

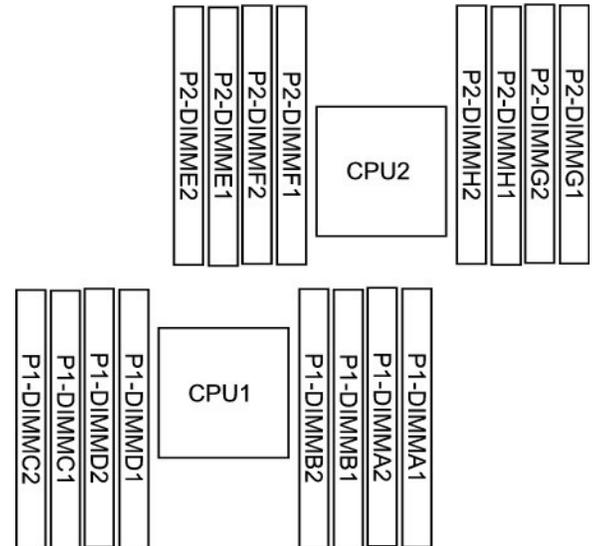

HostEngine 4URP supports one to four 2.5-inch SATA 3 solid-state drives (SSDs) to boot the operating system (OS). HostEngine 4U also accommodates PCIe flash / SSDs. Install PCIe flash or SSD cards in CPU1 Slot 10 and / or CPU2 Slot 11, if available. See page 4 for details.

Technical Specifications

Central Processing Unit (CPU)	Intel® Xeon E5-2600v4 Series
Number CPUs	2 x R3 with identical revision, core voltage and bus (core) speed
Socket	2011-pin R3 LGA
Speeds / Cores / Threads	1.8 – 3.5GHz / up to 22 cores / up to 44 threads
Intel Smart Cache	Up to 55MByte
64-bit computing	Up to 9.6 GigaTransfers/second (GT/s) across 2 QPI links
Quick Path Interconnect	Intel C612
Chipset	2400MHz
Front Side Bus Speed	RDIMM: 32GByte, 16GByte, 8GByte or 4GByte LRDIMM: 128GByte, 64GByte or 32GByte
System Memory Sizes	Standard ECC Registered DIMMs (RDIMMs) Optional Load-Reduced DIMMs (LRDIMMs)
Type	DDR4-2400MHz, 2133MHz, 1866MHz, 1600MHz
Configuration	512GBytes using 16 x ECC Registered DIMMs (RDIMMs) 2TByte using 16 x Load-Reduced DIMMs (LRDIMMs)
Maximum Size	Intel® Xeon E5-2600v4 Series
PCI Express expansion slots	4x PCI-E 3.0 x16 2x PCI-E 3.0 x8 (1 in x16) 1x PCI-E 2.0 x4 (in x8)
System BIOS	AMI®
Ethernet ports (standard)	2 x Intel RJ-45 ports
Controller	Dual Intel i350 network controllers
Support	10BASE-T, 100BASE-TX, and 1000BASE-T
Ethernet port (management)	RJ-45 port for management only
Controller	Aspeed AST2400 BMC with dedicated IPMI
Support	10BASE-T, 100BASE-TX, and 1000BASE-T
Serial ATA (SATA)	2 x SATA 3 connectors
Drive Format	2.5-inch (63.5mm) solid-state drive (SSD)
Transfer Rate	6.0GByte / second (theoretical)
Number of drives / Capacity	1 standard or 2 optional
Graphics Controller	Aspeed AST2400 BMC
Audio	High-Definition (HD) 7.1 with SPDIF-input digital header
Serial port	COM1 (DB-9)
Universal Serial Bus (USB)	Version 3.0
Ports	4: 2 x USB 3.0 and 2 x USB 2.0
AC Power Supply	3,000W total power with 3 + 1 hot-plug modules: each module provides auto-ranging 100 – 240VAC @ 15.0 – 7.5Amps
Operating Environment	0° to 30° Celsius (32° to 86° Fahrenheit) temperature 5% to 80% non-condensing humidity
Altitude	Maximum
Operating	10,000ft (3,050meters)
Storage	50,000ft (15,240meters)
Dimensions	7.00" H x 19.00" W x 26.00" D (17.78 cm H x 48.26 W x 66.04CM D)
Weight	49.0 lbs. (20.86kg)
Warranty / Period	Parts & labor return to manufacturer / 2 years
Ext. Warranty Period	Optional 3 rd year

Memory Configuration

DIMM Configurations for CPU1 Only		
# DIMMs	Location	Memory Scheme
4	P1-DIMMA1 P1-DIMMB1 P1-DIMMC1 P1-DIMMD1	Interleaved DIMMs must be identical type and speed
8	P1-DIMMA1 P1-DIMMB1 P1-DIMMC1 P1-DIMMD1 P1-DIMMA2 P1-DIMMB2 P1-DIMMC2 P1-DIMMD2	
DIMM Configurations for CPU1 and CPU2		
16	P1-DIMMA1 P1-DIMMB1 P1-DIMMC1 P1-DIMMD1 P1-DIMMA2 P1-DIMMB2 P1-DIMMC2 P1-DIMMD2 P2-DIMME1 P2-DIMMF1 P2-DIMMG1 P2-DIMMH1 P2-DIMME2 P2-DIMMF2 P2-DIMMG2 P1-DIMMH2	Interleaved DIMMs must be identical type and speed

Access

Remove / Replace HostEngine

HostEngine can be removed and replaced from the front once you remove power.

- Power down gracefully using the OS or the front-panel on / off switch.
- Wait for the power to shut off.
- Disconnect power and all other cables from HostEngine.
- Loosen the two retention screws on the HostEngine front panel.
- Gently tug the HostEngine handles toward you.
- Extract the HostEngine while supporting its weight.
- Slide the replacement HostEngine into the rack mount slide mounts.
- Slide HostEngine into the cabinet.
- Replace and tighten the retention screws.
- Connect power and all other cables to HostEngine.
- Power up HostEngine.

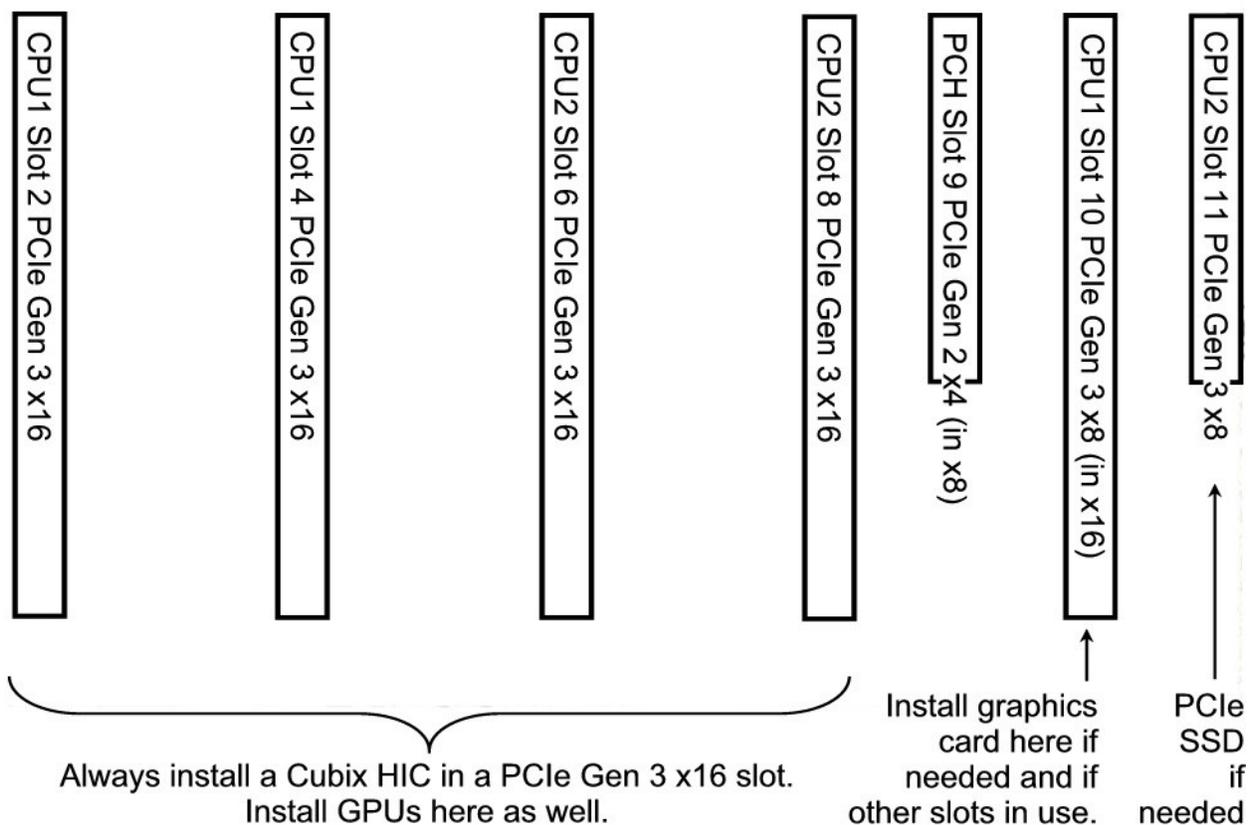

Remove and replace PCIe devices

PCIe devices can be removed and replaced from the top once you power down HostEngine and remove the cop cover. See the image below for the PCIe devices to install in each slot.

- Power down gracefully using the OS and wait for the power to turn off
- Loosen the two retention screws on the HostEngine front panel.
- Gently tug the HostEngine handles toward you.
- Remove the screws holding the top cover and set it aside.
- Disconnect auxiliary power cables from the PCIe devices such as accelerators, if needed.
- Remove / replace the PCIe devices and re-connect the drive power and data cables.
- Replace the top cover and its retaining screws.
- Slide HostEngine into the cabinet.
- Replace and tighten the retention screws.
- Power up HostEngine.

Note

Disconnect HostEngine power before removing any of its PCIe devices.

Remove and replace a SATA drive

SATA SSD drives are removable from the top once you power down HostEngine and remove the top cover.

- Power down gracefully using the OS and wait for the power to turn off
- Loosen the two retention screws on the HostEngine front panel.
- Gently tug the HostEngine handles toward you.
- Remove the screws holding the top cover and set it aside.
- Disconnect the power and data cables from the SSD.
- Remove / replace the drive and re-connect the drive power and data cables.
- Replace the top cover and its retaining screws.
- Slide HostEngine into the cabinet.
- Replace and tighten the retention screws.
- Power up HostEngine.

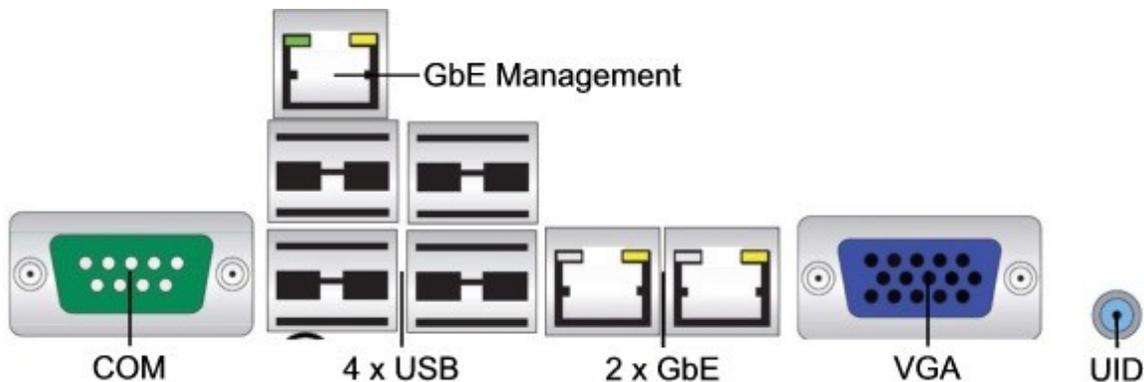

Note

Power down HostEngine before removing it or its solid state drive (SSD).

Connections, Controls and Indicators

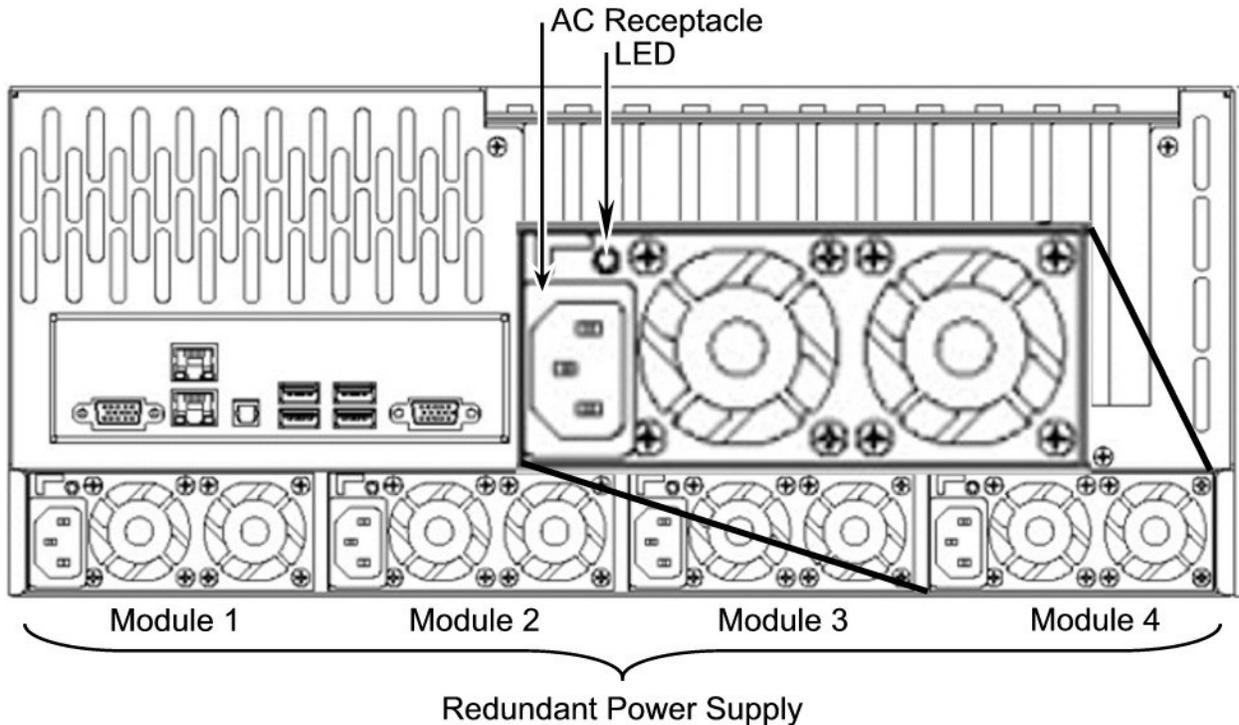

Connections

On the rear panel, HostEngine provides four USB 2.0 ports, two Gbps Ethernet ports, a COM port and an IPMI 2.0 GbE port.

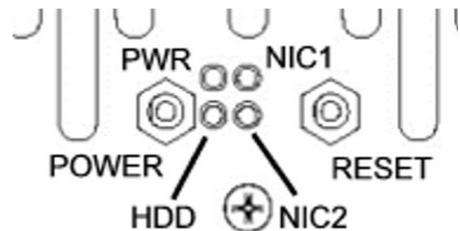

HostEngine rear panel also provides access for Cubix HICs that connect to Xpander Rackmount 8 or other Xpander enclosures using external PCIe x16 cables, if needed. With these connections, you can mount HostEngine immediately above or below Xpander.

The AC power receptacles are also on the rear panel. When you plug power into the power receptacles, each module's LED lights green if it is functioning properly. If not plugged in or if not functioning properly, each module's LED lights red.

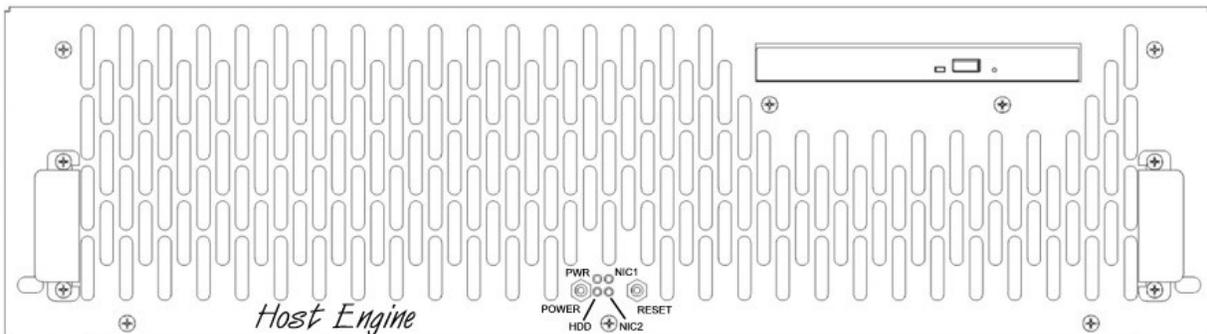

Controls

The front panel provides the power on/off button and the reset button. Pressing and releasing the power button during operation will provide a graceful shutdown of the operating system. Pressing and holding the power button for 4 seconds or more forces HostEngine to power off.

Indicators

Indicators (LEDs) for power (steady green), hard drive activity (flickering green), NIC1 (steady green) and NIC2 (steady green) are also on the front panel. See the image below.

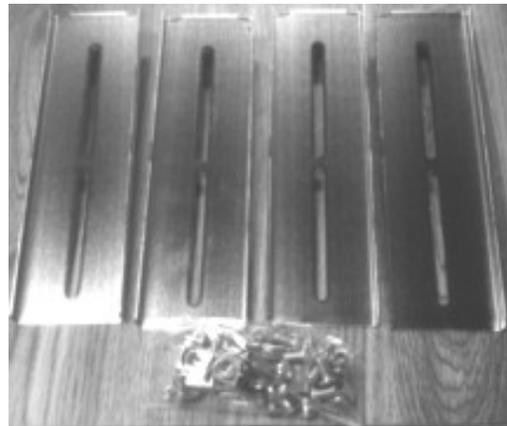

Install HostEngine in a Rack Mount Cabinet

Cubix ships HostEngine with the slide mounts installed on the enclosure.

Cubix ships the slide mounts mounted on the HostEngine enclosure.

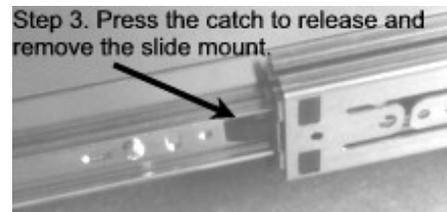

Within packaging, you will find four brackets that mount within your rack mount cabinet as well as screws, nuts and G-nuts for use in mounting HostEngine. See the image at right.

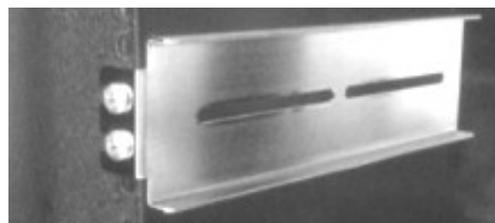

Cubix ships the mounting brackets, G-nuts and screws within the package.

Mount Xpander Rack Mount 8 immediately above or immediately below HostEngine in the rack mount cabinet. For this procedure, use a Philips #2 screwdriver, a flat-blade screwdriver and a 3/8" wrench or socket and drive.

1. Shut down HostEngine normally.
2. Disconnect all data and power cables.
3. Remove the two side mounts—one slide mount from each side of the HostEngine enclosure. To release each slide mount, slide it toward the rear of the enclosure until it stops. Press the catch to release and remove the slide mount as you can see in the image at the right.
4. Mount the HostEngine mounting brackets and slide mounts in your cabinet. Allow vertical space for 2U or 4U as appropriate for your enclosure.
5. Mount the front and rear mounting brackets in the left side of your cabinet. Make sure all four line up so that HostEngine is level within the cabinet. See the image at the right.
6. Mount each of the two sliders into the front and rear mounting brackets (Part # S18500A) and slider assembly with the bolts and G-nuts provided in the packaging. Use the Philips #2 screwdriver and the 3/8" wrench or socket to secure snugly but not tightly each slider to the front and rear mounting brackets. Check to make sure the mounting brackets and slide rails are level from front to rear before tightening the screws and nuts. Align the front of the slider with the front of the cabinet.
7. Repeat the process for the other two front and two rear mounting brackets and slider assembly on the right side of the cabinet.

Step 3. Press the catch to release and remove the slide mount.

Step 5. Mount the brackets in 4 corners.

8. Check to make sure that the slide rails are level, both from front to back and from right to left. Once you're sure the slide rails are level, you're ready to tighten the mounting screws. See the image at the right.
9. Tightly secure the screws holding the sliders to the front and two rear mounting brackets on each side of the cabinet.
10. Extend the slide rails almost all the way out the front of the cabinet.
11. Lift the HostEngine, line it up carefully and slide it into place. Before lifting the HostEngine into place, ask for assistance.

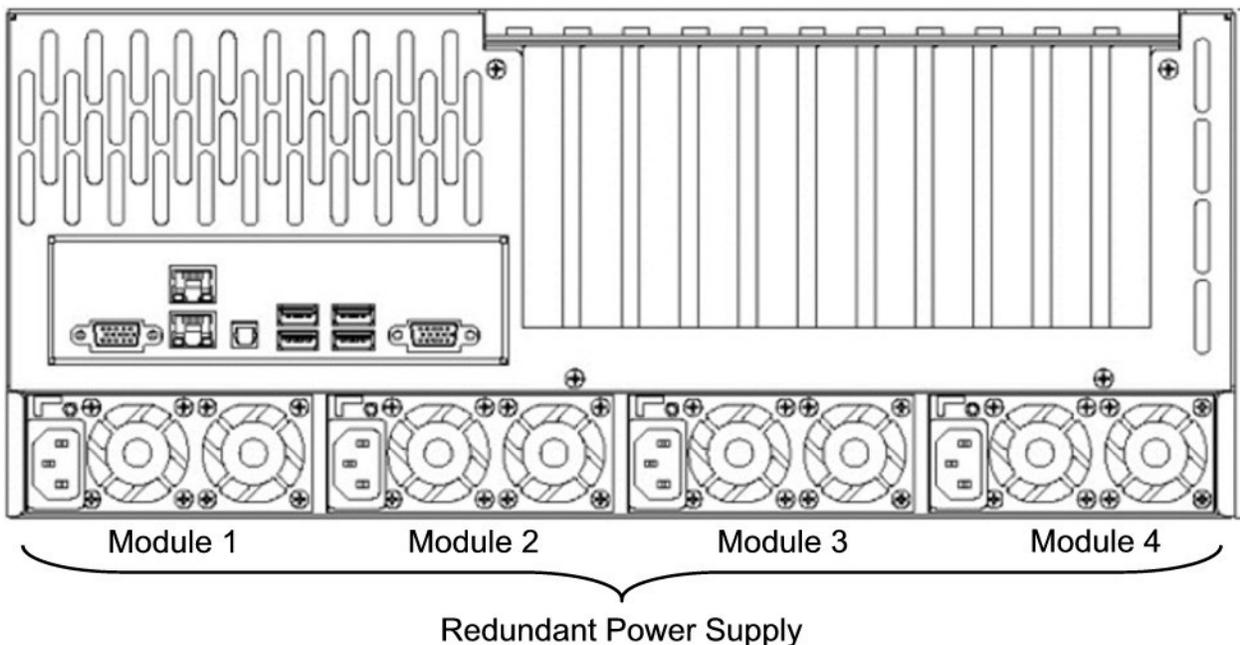

Step 8. Mount the slide rails on the mounting brackets (inside view).

Warning
Before you lift a HostEngine into place, ask for assistance.

12. Try sliding the HostEngine in and out slightly to make sure it moves freely.
13. Connect the AC power cords into the HostEngine rear receptacle.
14. Connect the PCIe x16 external cables to GPU-Xpander Rack Mount 8.
15. Power up HostEngine.

Replace a Power Supply Module

The power supply modules show a steady green LED when operating normally. A module with a red LED is either disconnected from power or has a fault. Check that the power cord is firmly seated. If an LED remains red, remove the power cord and replace the module. Confirm that the replacement module shows a steady green LED.

Access HostEngine Interior

For this procedure, use a Philips #2 screwdriver. For accessing HostEngine to add, move or replace memory, HICs or other adapters, use the following procedure.

1. Shut down gracefully HostEngine.
2. Remove the power cords.
3. Loosen the two retention screws on the HostEngine front panel.
4. Gently tug the HostEngine handles toward you.
5. Remove the screws holding in place the HostEngine front top cover, remove the top cover and the top end-bracket panel and set them aside.
6. Add, remove or replace the memory, HICs or other cards, making sure to seat each firmly in the socket or slot, secure the end bracket screws and to connect aux power cables, if necessary.
7. Replace the HostEngine front top cover and replace the screws holding it in place.
8. Gently slide HostEngine back in place.
9. Connect the AC power cords into the HostEngine rear receptacles.
10. Power up HostEngine.
